INDRA IS AT THE GLOBAL FOREFRONT WITH ITS NEW SOLUTION FOR SIMPLIFYING ACCOUNTING PROCESSES OF AIRLINES AND THE AIRLINE INDUSTRY

- **SuitAir RAS is a state-of-the-art platform, unique in the market, that simplifies accounting and enables airlines to analyze their revenues in real time, guaranteeing that data is 100% exact, increasing the traceability of revenues and cash flow, and facilitating faster and more secure management**

- **The company will present the development of its Revenue Accounting technology during its first Indra Airlines Summit, with which it intends to bring together the most representative agents of the airline sector on a global scale**

Madrid, June 01, 2017.- Indra, one of the world's leading global consulting and technology companies, has launched its SuitAir RAS platform, a one-of-a-kind benchmark system for airlines to improve their Revenue Accounting processes. The application will be officially presented to the airline industry at the Indra Airlines Summit, on June 5-6 at the company's headquarters, and will count with the attendance of some of the main managers of this industry worldwide.

SuitAir RAS is a state-of-the-art end-to-end solution that obtains maximum simplification of accounting operations, enabling airlines to reach the highest level of process automation. Revenue accounting at airlines is a complex and vital process, as it generates key information for income statements and decision-making. The Indra platform, designed on the basis of best practices and cutting-edge technology, enables analyzing revenues in real time, guaranteeing that data is 100% exact, increasing the traceability of revenues and cash flow, and facilitating their faster and more secure management.

One of the major advantages of SuitAir RAS is its flexible and modular design that guarantees the system's horizontal scalability and functional decoupling of its different applications, thereby enabling teams to work in complete independence. Furthermore, it entails significant cost reductions for the client, as it may be offered in cloud mode and minimizes manual interventions.

The system offers full functional coverage for all business processes while facilitating its adaptation to each airline's own diversity, streamlining its integration with its own operating systems. In this regard, it not only incorporates the new NDC (New Distribution Capabilities) international standard, but also supports airlines' e-ticketing or ticketless requirements, and offers a global vision of the entire document life cycle.

SuitAir RAS is a development of Indra's Revenue Accounting solutions, used by over 30 customers on the five continents and more than 130 million passengers every year. In Latin America alone, Indra's revenue accounting technology manages over 100 million passengers, representing over 75%.

Indra Airlines Summit, the industry's meeting place

The progress of Indra Revenue Accounting technology will be one of the main attractions of the first Indra Airlines Summit, a forum and meeting place that is born with the goal of becoming a benchmark destination for discussing technology applied to the airline industry.

Along these lines and in addition to SuitAir RAS, the company will also speak of other solutions that have transformed it into one of the technology partners of reference so that industries and airlines may improve their processes and reach maximum levels of profitability and efficiency. One example of this is Suitair IBE (Internet Booking Engine), the Indra platform used by some of the market's most representative airlines, which makes for easy bookings, flight management and ticket purchasing, while also allowing airlines to

include additional products and services, such as insurance cover, car rentals and hotel reservations at the destination, thus increasing revenues and improving the passenger experience.

Other issues like cybersecurity, ecommerce, Business Intelligence, consulting or cloud services that are changing our way of understanding and managing business processes, will also be focal points of debate, in line with the need for adapting to new processes to face the digital transformation, increase profitability for clients and service excellence for passengers.

Indra is at the forefront of technology in the air transport sector, where it has been offering, for over 25 years, solutions and services designed to achieve continuous improvement in airline productivity and resource management. Indra systems, used to manage over 100 million reservations per year, improve its clients' competitiveness and enable them to access new market opportunities and address the newest challenges in this constantly changing sector.
