

MINSAIT AND FireEye JOIN FORCES TO PROTECT E-MAIL FROM THE MOST ADVANCED CYBERTHREATS

- Minsait and FireEye come together to protect e-mail from Ransomware attacks and Advanced Persistent Threats, among other risks
- This is a service in the cloud that enables access by any company to state-of-the-art technologies at a minimal cost
- According to data of the National Cryptologic Centre, 75% of cases of malware infections at companies occur through personalized, deceitful e-mails

Madrid, June 20, 2017.- Minsait, the Indra business unit that tackles the challenges posed by digital transformation to companies and institutions, and FireEye, have teamed up to develop FEE(P) Mail Defense, a solution capable of protecting e-mail from the most sophisticated attacks.

The solution combines Minsait's capacity to analyze e-mail and manage incidents, with the efficiency of Fire Eye's Email Threat Prevention (ETP) tool that is capable of detecting highly complex attacks.

From the cloud, the tool analyzes e-mails before the recipient opens these in the inbox. Therefore, companies are protected from Ransomware infections which encode information to request ransom, and from Advanced Persistent Threats, that steal data or alter business processes without being detected.

This service, available 24x7, is adapted to companies with corporate e-mails in the cloud as well as those that have their e-mails at their own installations. FEE(P) Mail Defense grants companies access to state-of-the-art intelligence and technology, without requiring an investment in own systems, which commonly become rapidly obsolete.

According to data of the National Cryptologic Centre, 75% of cases of infections at companies occur through highly personalized, deceitful e-mail messages. This technique, known as *Spear Phishing*, exploits social engineering techniques to direct attacks at persons with relevant positions or who have access to key systems. Given their use of highly advanced malware developed with great amounts of resources and effort, usual security measures are incapable of detecting these types of attacks.

About Minsait

Minsait is Indra's business unit that addresses the challenges posed by digital transformation to companies and institutions, via an offering that provides immediate and tangible results. Indra has grouped its entire digital business technology and consulting solutions under Minsait, which has established itself as one of the leading companies in said market in Spain. This it has managed based on a differential approach, a broad portfolio of business solutions, a proprietary and unique sales model, delivery and support aimed at impact generation, and a flexible organization based on multidisciplinary teams, comprised of specialists with very specific profiles. Minsait completes Indra's existing offering of high-value vertical products, helping to orientate all services to cater to clients' key business needs, and thus becoming a driving force behind their growth.
