

INDRA RENEWS ITS OFFERING IN SYSTEMS AND TECHNOLOGIES FOR DEFENSE AND SECURITY TO REINFORCE ITS LEADERSHIP

- **It is rationalizing its offering to provide clients with solutions and comprehensive end-to-end services in all five areas Defense in the most responsive way, according to the specific demands of each one of them**
- **The company has the critical mass, innovative capacity, and capability to establish the extensive alliances required to lead in the EU's major defense programs**
- **Indra combines the solidity of the physical world with the innovations of the digital world. It is leveraging artificial intelligence, big data and hyperconnectivity to create Defense 4.0**

Madrid, May 27, 2019.- Indra has restructured its offering in Defense and Security to position itself as one of the leading companies in the global market, with the capability to meet - with its comprehensive end-to-end systems and technologies - the needs in the five areas of Defense: Land, Sea, Air, Cyberspace and Space.

The company develops its own cutting-edge technologies to strengthen security, which makes the world a safer place to live in. It achieves this by building ecosystems and cooperative environments, where clients, partners and governments unite to innovate.

To respond to the needs of a new and constantly changing environment, where new challenges must be addressed quickly, it has organized its business areas according to seven core elements:

- **Platforms**, focused on developing the most rigorous systems for state-of-the-art land, maritime and airborne platforms.
- **Defense Systems**, focused on integrated Command and Control systems to support more complex operations scenarios, such as Electronic Defense, digitalization of Operations, and airspace surveillance and control.
- **Security**, where all the protection service technologies are developed to anticipate and deal with any and all kinds of threats.
- **Cyber-defense**, to manage all kinds of cyberspace threats.
- **Space**, for the use of space technologies applied to military operations.
- **Services and training solutions**, encompassing every level of civilian and military simulations.
- And **Logistics and Maintenance**, to guarantee the optimal development of the defense systems' lifespans.

The rationalization that Indra has carried out of its extensive portfolio of solutions and services will drive forward and speed up their development, with the objective of continuing to achieve the critical mass that is essential to compete in this sector, on a global scale.

Being big enough is an essential requirement to lead the multinational consortia that are emerging to compete for major the defense programs that will be undertaken by the European Union, expected to generate a €13 billion cash flow during the period 2021–2027. Participating in these programs will set the course for the future of Spain's Defense and its technological improvement.

The renewed basis of Indra's offer is also designed to respond to the fresh need to deliver solutions that combine the solidity of the physical world and the capacity to innovate in the digital world. Defense and Support 4.0, Big Data, Data Analytics, and Artificial Intelligence are some of the areas that Indra is currently working on.

Concurrently, the restructuring of the offering is redefining the work processes within the company, to further strengthen its capabilities to innovate and develop its own ground-breaking solutions, ensuring a quicker delivery of said solutions, and to respond to changes as they emerge. All of this while maintaining its outstanding ability to adapt to the needs of each client and provide solutions to their problems.

About Indra

Indra (www.indracompany.com) is one of the leading global technology and consulting companies and the technological partner for core business operations of its customers world-wide. It is a world-leader in providing proprietary solutions in specific segments in Transport and Defense markets, and a leading firm in Digital Transformation Consultancy and Information Technologies in Spain and Latin America through its affiliate Minsait. Its business model is based on a comprehensive range of proprietary products, with an end-to-end, high-value focus and with a high innovation component. In the 2018 financial year, Indra achieved revenue of €3.104 billion, with 43,000 employees, a local presence in 46 countries and business operations in over 140 countries.
