

INDRA TAKES DEVELOPMENT OF TRANSPORT AND DEFENCE SOLUTIONS TO ITS HIGHEST LEVEL OF EFFICIENCY AND QUALITY WITH A CMMI RATING OF 5

- Three of the company's software development centers obtain the highest CMMI rating, a worldwide benchmark that endorses quality and best practices in software engineering and development, reserved for leaders in each sector who prove the highest performance capacity and continuous improvement
- Indra follows the highest standards in project management and development, ensuring its customers solutions they can rely on to carry out business-critical operations

Madrid, April 12th, 2022 - Indra, one of the leading global technology and consulting companies, has been recognized by the CMMI institute, a worldwide benchmark that endorses quality and application of best practices in software engineering and development, with a level 5 for maturity, which distinguishes those companies that show the highest level of efficiency in their processes. The company thus guarantees the highest quality levels in the critical systems of Transport and Defence that it delivers to countries around the world.

Indra's three Transport and Defence software development centers in Seville and Malaga have passed one of the most demanding evaluation models in existence, designed by the CMMI institute and promoted by the U.S. Department of Defence, the U.S. National Defence Industry and the Carnegie Mellon Institute of Electronic Engineering.

It is an evaluation and continuous improvement focused model of software development processes and management of projects and organizations. Level 5 is the highest one possible and only a small group of leading companies in the high-tech, banking and health care sectors worldwide have this rating.

The CMMI assessment has led to an in-depth review of each of the organizational, management, engineering and development processes at these three centers. The company has systematized planning, monitoring and control of each project to its maximum extent possible.

It has also been reviewed to ensure that best practices are followed in customer relationship, joint decision-making and analysis of the situations that allow lessons to be learned and detect opportunities for improvement. All processes are measured and analyzed following different statistical models, in order to compare them, implement improvements and measure them again.

In this way, the company achieves continuous improvement of efficiency levels in each of its projects, providing customers with the level of quality they demand and guarantee that their systems will always perform as expected. This ensures that systems critical to aircraft safety, air, road or rail traffic management or protection of a country, operate with no margin for error.

It is not only about getting systems to achieve this level of reliability; project management also often requires meeting tight deadlines, adapting solutions to customer's specific needs, running them in places where they have never been tested before. In these cases, the best formula for success is the systematization of processes.

In obtaining CMMI level 5 qualification, these three Indra software development centers are aligned with the application of Security Solutions at Indra's Excellence Center in León (Spain), and the company's Air Traffic Management Systems. It is a model that sets Indra apart from other companies and makes the difference when competing for the most demanding, high-value contracts.

About Indra

Indra (www.indracompany.com) is one of the leading global technology and consulting companies and the technological partner for core business operations of its customers worldwide. It is a world-leader in

providing proprietary solutions in specific segments in Transport and Defence markets, and a leading firm in Digital Transformation and Information Technologies in Spain and Latin America through its affiliate Minsait. Its business model is based on a comprehensive range of proprietary products, with a high-value, end-to-end focus and with a high innovation component. In the 2021 financial year, Indra achieved revenue of €3.390 billion, with over 52,000 employees, a local presence in 46 countries and business operations in over 140 countries.
