DEFENSE & SECURITY

ALPHARD
FOR LONG RANGE SURVEILLANCE

Máximo flexibility and performance, long range surveillance 24/365

indracompany.com
ALPHARD
for Long Range Surveillance

Family of open modular systems for observation and surveillance.
The Alphard is based on a high performance pan & tilt with high capability for strong wind loads and high sensor loads.

SYSTEM OPERATIONAL DETAILS

ALPHARD is a family of products developed by Indra in the field of security and defense providing search, follow up, classification and tracking of long distance targets during 24 hours, 365 days a year.

ALPHARD combines an optimum selection of last generation electro-optical sensors over a high mobility gyro-stabilized platform.

The system can be fully integrated with local or remote radar data through friendly HMI software, providing identification and location of a mapping target.

Additionally the system incorporates a series of image processing modes that improve the capacities of the acquired images, elaborating and classifying collected data as well.

ALPHARD is easily adaptable to the specific requirements of a given application; its modularity allows a simple on-site maintenance as well as a direct upgrade path for new sensors and available technologies.

ALPHARD configuration increases the time of operability, reduces the cost of maintenance, and increases the life cycle of the system.

ALPHARD uses a modular pan & tilt platform which can incorporate up to 5 advanced electro optical sensors and it is designed to fulfill the present and future needs of modern surveillance systems that require and affordable “all in one” solution for:
• Observation/Surveillance of large areas on patrol.
• Determination of object coordinates.
• Operation with optimum performance Day/Night and on reduced visibility situations like fog, rain, mist, dust, smoke and camouflage or other visible disguise.

AS A STAND ALONE DEVICE OR FULLY INTEGRATED INTO A SURVEILLANCE SYSTEM
APPLICATIONS

• Observation/surveillance of large areas: on fixed towers of mobile vehicles.
• Recognition and positive identification.
  - Designed for continuous operations 24 hours / 365.
  - Exact and fast transmission of object coordinates.
• Border protection or surveillance: suitable for towers, vehicles or ships.
• Very effective against smoke, dust or camouflage.
• The system can be fully integrated into command Centers and with other sensors (radars, etc.).
• Used by police and military forces over the world in the most severe environments.

ADVANCED ZOOM MULTISENSOR

• State of the art 3rd Generation “Full TV” (640 x 512) thermal camera with 28X optical zoom.
• Color TV camera with 140 X optical zoom (Optional HDTV).
• Eyesafe Laser rangefinder with 20 Km maximum range.
• Advanced Digital Image processing:
  - Automatic focus on both IR and TV.
  - Pseudo-color: 4 selectable color palettes.
  - Active noise reduction.
  - Local Area contrast enhancement and edge enhancement.
• Robust design.
• Flat windows for easy cleaning.

MAIN FEATURES

• State of the art sensors: long range.
• Easy to upgrade, modular design.
• Low cost over lifetime.
• Panoramic image capability.
• Smooth low speed motion for long range tracking.
• Highly resistant to wind.

INTERNATIONAL REFERENCES

MMI FUNCTIONALITY

• Control and Status of All ALPHARD components.
  - Pan & Tilt motion.
  - Zoon / focus with preset values.
  - Distance and coordinate measurement.
  - Management of additional displays.
• Geo location of targets.
• Definition of alarm zones.
• Elaboration of reports.
• Video recording & playback.
• Automatic target location.
• Automatic direction of cameras to located targets.
• Programmable scan of areas of interest.

BORDER PROTECTION

SHELTER OR VEHICLE MOUNTED

• Standard or Custom Shelters.
• Vehicle independent.
• Option of low noise generator or Air Conditioned.
• Two consoles, long and comfortable observation.
• Extensive recording capabilities.
• Wireless, Radio SATCOM or fiber optics communication.
• Very long Range: 20 Km.
• Border or coastal surveillance.

INDRA’S ALPHARD IS BECOMING COMMONPLACE IN BORDER SURVEILLANCE AND INTELLIGENCE ARROUND THE WORLD
