Fire
Air conditioning
Time control
Energy consumption
...

System in which the security control is centralized with Integra

FUNCTIONAL DESCRIPTION

Display and alarm management regardless of the hardware used.
Historical query.
Statistical query.
System status query.
Accreditations management.
Event setting and slogan of action as needed.
System configuration regardless of the hardware installed.
Graphic display of devices on planes.
Users management.
Para el hardware que no esté integrado en Integra se deberá realizar un proceso previo de adaptación.
Bidirectional management in accordance with Alarm Center
Video display regardless of the hardware installed.
Downloading of recordings.
Supported in the existing network infrastructure and adjusted depending on the capacity of such infrastructure.
Use of corporate resources: different systems such as backup, equipment monitoring, network management integration (Openview, traps, ...) as well as support elements for the monitoring of remote equipment.
Non integrated hardware needs to do a previous adaptation process.

TECHNICAL DESCRIPTION

Scalable system.
Allows easy integration with other systems.
Support for multiple simultaneous users both in operation and management.
High-adaptability to changes (three layers).
Designed to support contingency centers.
Multilanguage application.
Configurable user interface.
