

# Integra iSIM (Smart Security Control Center) Suite for comprehensive security management

The iSIM Comprehensive Security Management tool takes us a step closer toward Predictive Security and Early Warning

## Security Systems

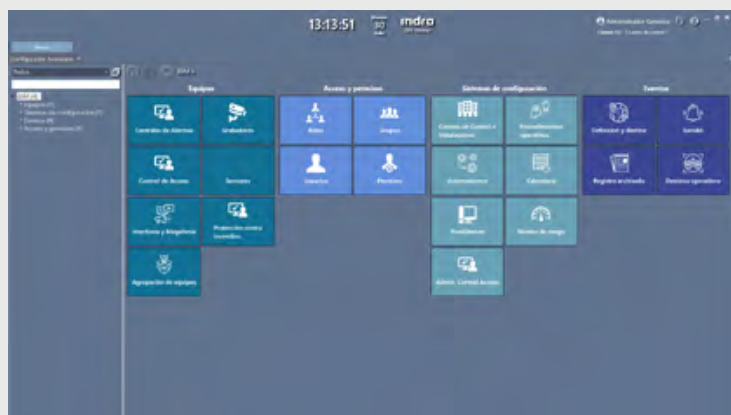

- Intrusion Systems.
- Access Control Systems.
- Fire Protection Systems.
- Video Management Systems.
- Video Analysis Systems.
- PA, Intercom Systems.
- Face Recognition Systems.

## Additional modules

- COVID management module.
- Emergency management module.
- Anti-drone management module.

## Operational tools

- Control panels and BI.
- Incident forensic analysis tools.
- Predictive maintenance and Deep Learning tools.
- Metadata operational tools.

## Functional description

- Alarm viewing and management regardless of the hardware used.
- Log queries.
- Statistics queries.
- System status queries.
- Auditing actions.
- Internal rules engine to configure events and response protocols according to needs.
- Devices displayed in the form of maps.
- System configuration regardless of the installed hardware.
- User management.
- Two-way management depending on the Alarm Monitoring Center.
- Video viewing regardless of the installed hardware.
- It relies on the existing network infra-structures and adapts to their capacity.
- Downloads of recordings.
- Use of corporate resources: backup, equipment supervision and network management integration systems (openview, traps, etc.) to support the supervision of remote equipment.
- If new equipment is integrated, a specific plugin will be developed before the integration tools provided by the manufacturer are analyzed.

## Technical description

- Scalable system.
- Allows easy integration with other systems.
- Support for multiple simultaneous users, both for operation and for management.
- System highly adaptable to changes (three layers).
- Systems designed to support contingency centers.
- Multi-language application.
- Configurable user interface.
